

## Fernco Drain Seal

### Stops insects, suds and odours and viruses

Drain Seal by Fernco is designed to prevent contaminants entering properties/buildings from drains.

The EPDM rubber valve, which can be simply retrofitted into a riser pipe, acts as a one way valve allowing waste water to exit the building whilst preventing the return of toxins, odours and insects entering properties via waste pipes.

The Drain Seal helps protect people coming into contact with pathogens by creating a resistant barrier between the open drainage system and the atmosphere of a building.

### Components

EPDM rubber valve that can be pushed straight into a 100mm waste pipe.

Fit in seconds.

Remove and re-fit as needed.

Maintenance free.

Permanent cost effective solution.
