

Rheem Dairy Hot Water Cylinders

Better insulation and efficiency, better for the environment.

Rheem dairy water heaters are made to “A” grade specifications, meaning better insulation and efficiency. The water heater comes pre-wired, and are fitted with 3kW/6kW dual element. It is wired for 3kW but can easily be adjusted to 6kW to provide faster recovery. Heaters are also supplied with two independent adjustable single-pole thermostats.

New design with the position of the element and thermostat close to the outlet and sight glass and moving handles.

Galv Jacketed Copper Inner Tank with 50mm foam insulation (low pressure). Tank wall is 0.7mm.

Features

Easy to install and move - moving handles mean the large dairy cylinders are easy to manoeuvre in and out of position

Space saving - closer manifolding. The element and thermostat can be serviced from the front.

Ease of serviceability - access to the element and thermostat is as easy as removing the front cover

Supplied with two independent adjustable single-pole thermostats.

Optional hard water elements available on request at an additional cost.
