

Watts Series PRVA - Pressure Reducing Valves

Headline

Designed to control and reduce the incoming water pressure to a compliant level to protect plumbing system components and assist in reducing water consumption.

This series is suitable for water supply pressures up to 2000 KPa and come with factory pre-set at 500 KPa.

Suitable for water supply pressures up to 1600KPa.

All parts are quickly and easily serviceable without the need to remove the valve from the line

Features

High performance and high flow capacity

Adjustable Range: 150-600KPa

No breather hole

Low noise profile

Serviceable in-line for PRVAS

Compact design & Brass body construction

Internal stainless steel strainer

Brass disc with EPDM diaphragm
